CLAROFLEX:

WE MANUFACTURE THE SYSTEM IN EUROPE, AS HAVING HIGH **QUALITY PRODUCTS WITH A** LONG LIFE SPAN IS EXTREMELY IMPORTANT FOR US.

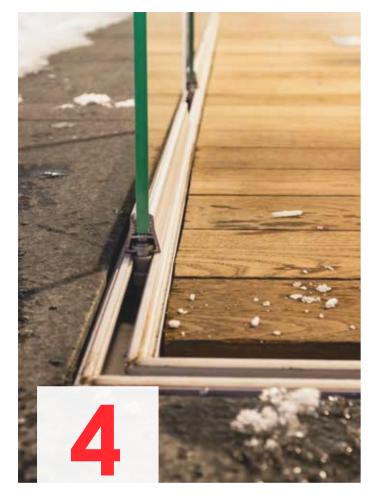

All EU-manufactured components have passed the necessary tests, obtaining the correspondent certifications.

CONTRARY TO OTHER MANUFACTURERS. THE PANELS WEIGHT DOES NOT HANG FROM THE CEILING BECAUSE WE WANT THE SYSTEM TO BE THE SAFEST POSSIBLE FOR YOU AND YOUR FAMILY.

Our bottom-weighted system is more steady while in use and it is more resistant to wind gusts.

**OUR SYSTEM IS THE MOST AIRTIGHT** ON THE MARKET, WHICH ALLOWS YOU TO USE IT CONFORTABLY THROUGHOUT THE YEAR.

According to the tests results, CLAROFLEX® Pivot is the most hermetic system of its class, especially if combined with our SideLock system and our 'H' sealing strips.

WE DO NOT USE ANY BEARINGS SINCE WE DO NOT WANT YOU TO DO ANY KIND OF ADDITIONAL MAINTENANCE NOR PRODUCE ANY SOUND WHILE **GLIDING THE PANELS.** 

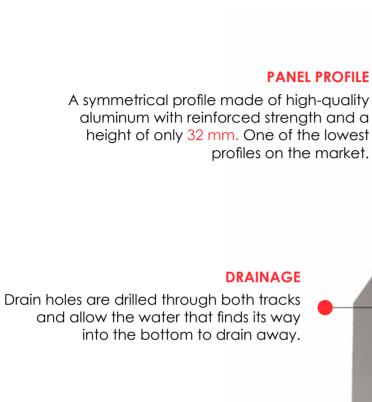

Panels glide silently on the sliding surface.

**OUR SYSTEM FITS PERFECTLY IN ANY OPENING BECAUSE WE OFFER A** LARGE RANGE OF CONFIGURATIONS WHICH ALLOW YOU TO STACK THE PANELS WHERE YOU CHOOSE.

The panels open either inwards or outwards and glide in any chosen direction.

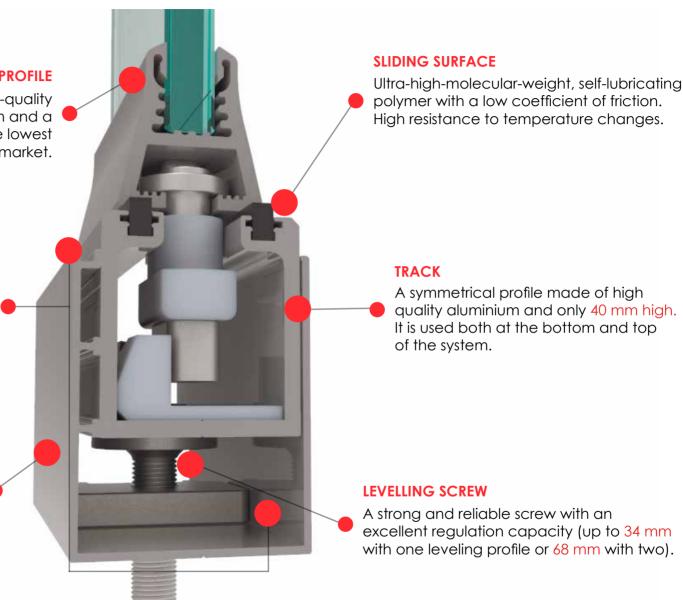

**OUR PROFILES' DESIGN MAKES FOR EASY** LEVELLING, WHICH HELPS TO OBTAIN A BETTER AND MORE EFFICIENT **INSTALLATION AND SIMPLIFIES ANY** FURTHER ADJUSTMENT WHEN NEEDED.

The system can correct uneven openings up to 68 mm when using both bottom and top levelling profiles.

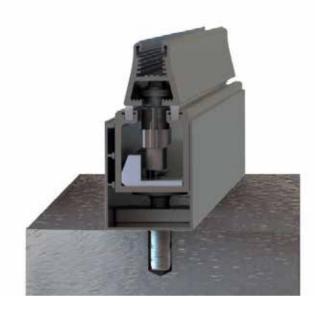

## LEVELLING TRACK

54 mm high aluminum profile designed to compensate the unevenness of both the floor and the ceiling. Using the levelling track will allow you to adjust the height of the system.

# POSSIBLE CONFIGURATIONS WITH LEVELLING PROFILE

## SYSTEM INSTALLED OVER THE FLOOR

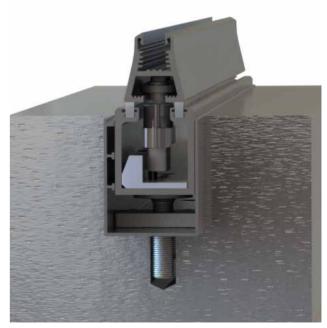

The ensemble of both the levelling profile and bottom track is only 54 mm high and it is installed over the finished floor. This configuration is perfect for balconies and openings where passage is not very frequent.

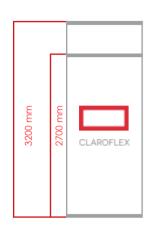

#### **RECESSED SYSTEM**

The ensemble of both the levelling profile and bottom track is only 54 mm high and it is embedded in the floor, previously adapted for this purpose. This configuration is perfect for openings with very frequent passage.

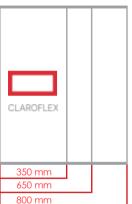

#### **SYSTEM HEIGHT:**

Maximum system height with 8 mm glass is 2700 mm.

Maximum system height with 10 mm glass is 3200 mm.

Maximum system height with 12 mm alass is 3200 mm.

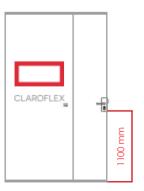

#### **PANEL WIDTH:**

Recommended width: 650 mm.

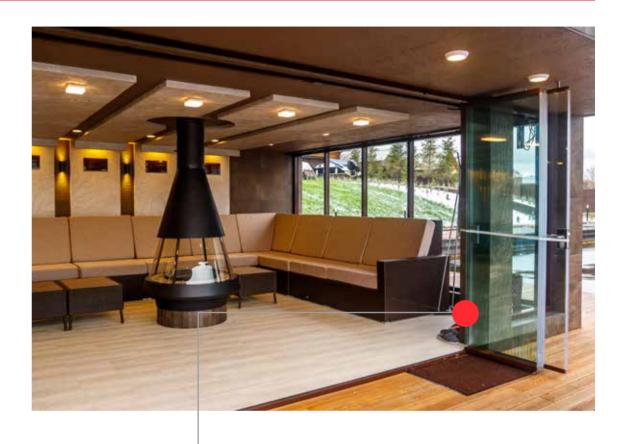

Maximum panel width: 800 mm.

Minimum panel width: 350 mm.

# **INSTALLATION OF DOOR COMPONENTS:**

Locks are usually set at 1100 mm from the floor.

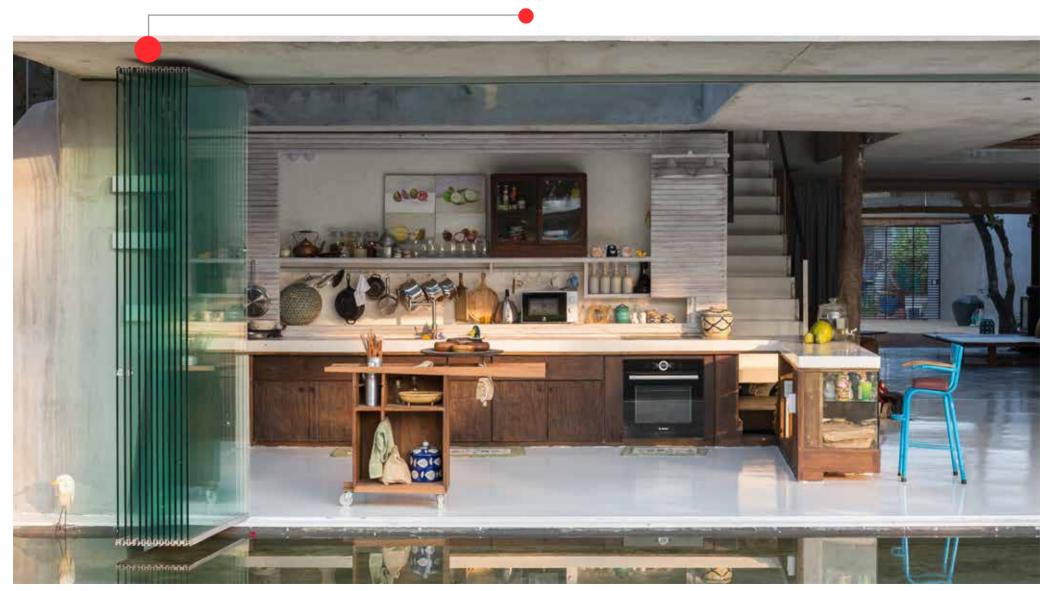

#### PANEL WIDTH VARIES BASED ON THE SELECTED SECURITY LOCK:

When using a long handle lock, the panel's width increases in 190 mm.

When using a short handle lock, the panel's width increases in 100 mm.

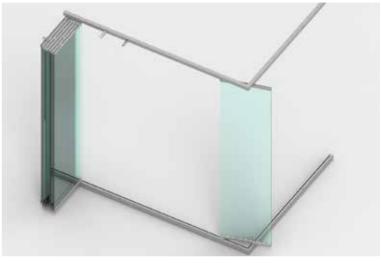

For a system using standard bottom and top locks and glass knob, it is not necessary to increase the panel's width.

Panel stacking points can be placed in one or both ends of the opening, or even in the middle, without the need of additional structural tubing. Each opening can stack up to 18 panels.

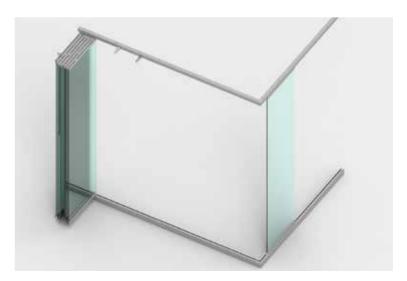

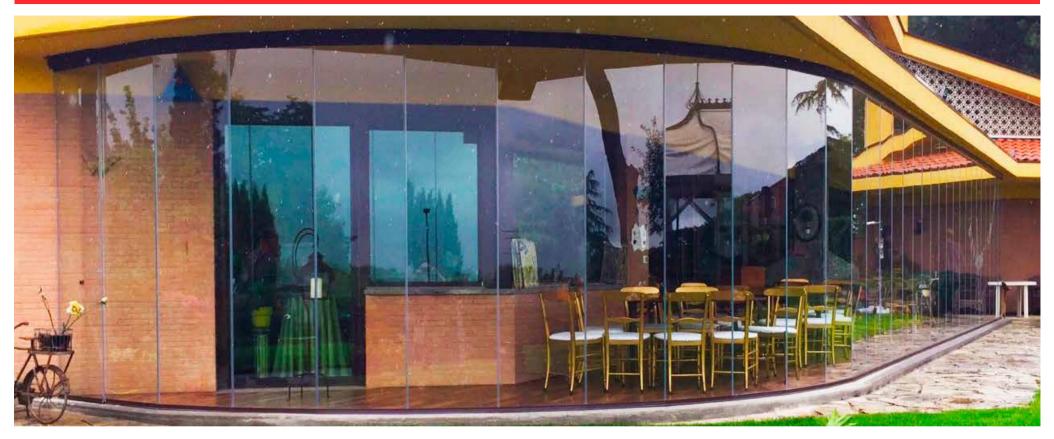

Panels can move through corners with angles between 90° and 270°.

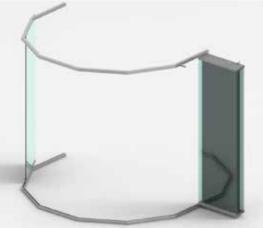

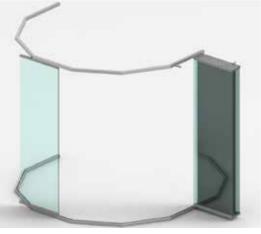

Glazings with a corner joint do not require any additional structural reinforcement.

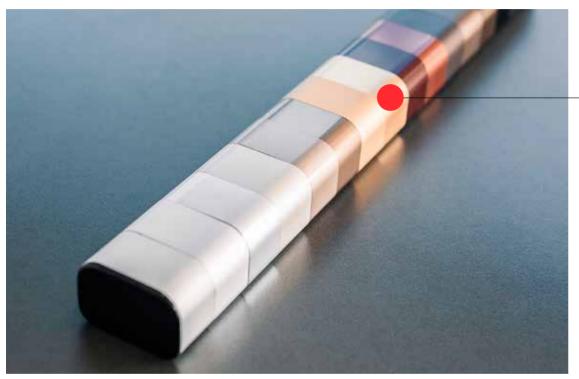

Panels can move through angled openings and several corners, stacking to one or both ends.

When designing the glazing in a corner or angle configuration, it is necessary to take into account the distance to any obstacles, such as columns, structural tubings or railings, since panels exit the glazing perimetre when gliding through the corners.

# **CLAROFLEX® PIVOT PROFILE**

The system can be customized as per your needs and to match the existing structure.

## **ANODISED**

We have a wide range of anodised colors with the possibility of supplying matte, gloss and high gloss finishes.

The standard thickness of this coat is 15 - 20 microns.

# **RAL COATING**

You can also choose any RAL colour from the RAL chart.

# **CLAROFLEX® PIVOT PROFILE**

# **WOOD-LIKE FINISHES**

Decorative coatings that imitate the design and texture of different types of wood.

# **CLAROFLEX® PIVOT GLASS**

## **DIFFERENT GLASS CUSTOMISATIONS:**

- solar control glass,
- etched/patterned glass,
- tinted glass using either a polyvinyl butyral or exterior layer with or without solar control or reflection properties.

Depending on the height of the system, you can use 8, 10 or 12 mm tempered or laminated glass.

# **CLAROFLEX® PIVOT BRUSH**

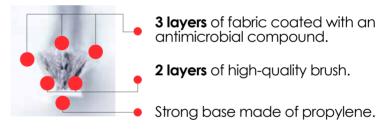

#### **BRUSH**

It offers a silent functioning of the system while it ensures the sealing between the panels and the top track.

Black Grey

#### **TRIPLE BRUSH**

It is recommended for exterior use when added to our Side Lock system to better endure strong gusts of wind, creating a single-panel effect when the system is closed. It gives more insulation to the system and reduces the heat loss.

# **SLIDING SURFACE**

Made of polymer with a low friction coeficient, it is placed on the bottom track to guarantee a smooth glide of the panels along the system.

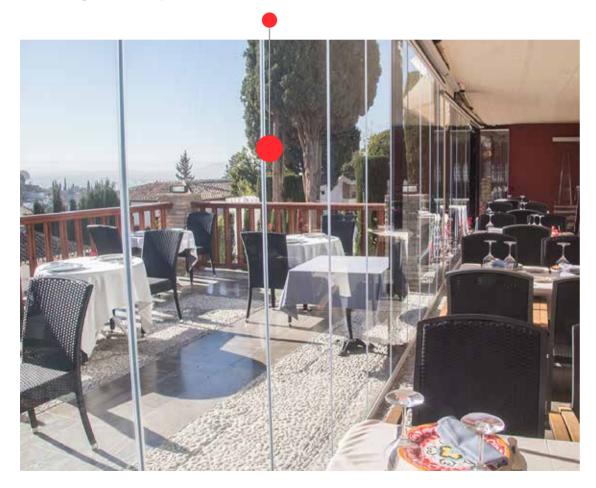

Black White Grey

# **CLAROFLEX® PIVOT SEALING STRIPS**

#### **PVC SEALING STRIPS:**

Hard PVC strips are fitted between panels to improve the system's watertightness. Flexible strips and bubble strips are installed at the ends of the system, closing any possible gaps between the panels and the walls.

Sealing strips' dimensions vary depending on the chosen glass thickness and the height of the system.

«H» strip

«H» strip UC\*

«h» strip

«h» strip UC\*

Bubble strip

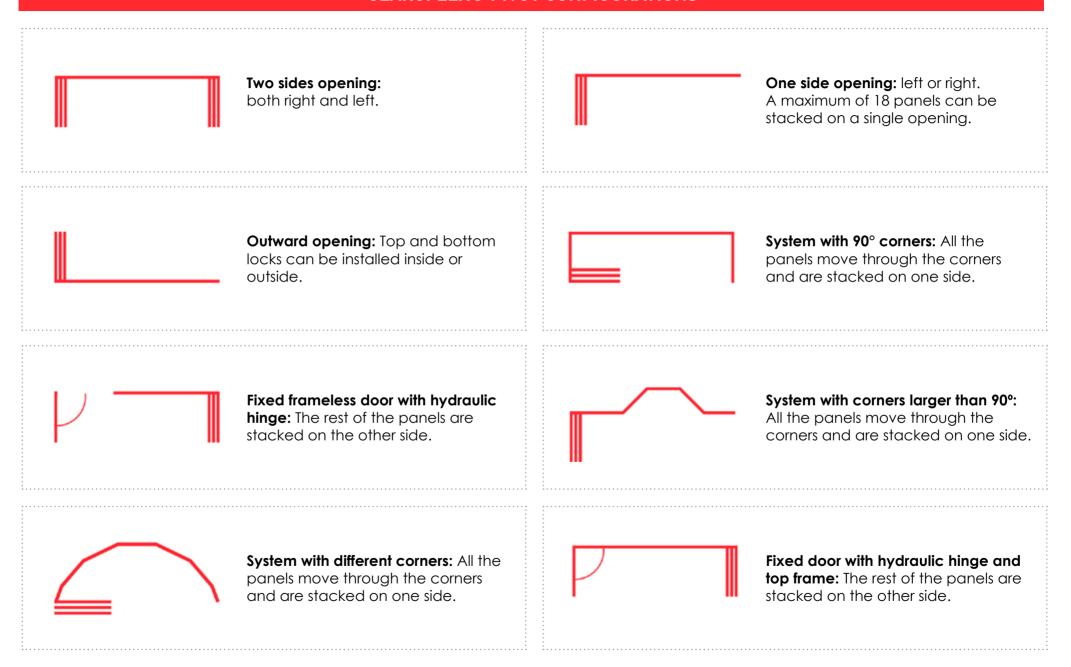

Flexible strip

Open «D» shaped strip

Open «D» shaped strip for caps

#### **ARMLESS SYSTEM**

With our armless configuration you can place curtains or blinds very close to the system. In addition, closing the door panel is much easier as the upper latch engages automatically when pushing the panel.

## DOOR WITH HYDRAULIC HINGE

In order to provide an easier access into the room, it is possible to install a fixed independent door with a safety lock using a standard hydraulic hinge, fully compatible with CLAROFLEX® Pivot system, which will allow you to open the door in any chosen direction.

# **OUTWARDS OPENING CONFIGURATION**

The system can be also opened outwards in either one or several stacking points for a more convenient placement of the furniture or other decoration in the room. In addition, the doors can get the top and bottom locks in either side of the system: interior or exterior.

#### SIDELOCK SYSTEM

A SideLock is made up of two profiles: the fixed one holds the handle while the second one is movable and produces the pressure that closes and locks the system.

When turning the handle 180° the system applies the maximum pressure over the panels, making the system more watertight.

#### **TECHNICAL SPECIFICATIONS:**

Maximum system height: 3200 mm.

Maximum pressure to system: 300 Kg.

Maximum wind load: 239 Km/h.

20% soundproofing increase.

20% heat loss reduction.

Lock type: lock with or without cylinder in one or both sides.

#### **Installation recommendations:**

High wind load areas, coastal regions, very rainy climates and areas with continental climate.

## Configuration customisation:

Profiles can be customised by applying any ral, anodise, or wood-like finishes.

Handles can be customised by applying any chosen RAL.

Single 180° SideLock with key

Single 180° SideLock without key

Double 180° SideLock with one key

Double 180° SideLock without keys

#### **SLIDING DOOR**

Our CLAROFLEX® SlidingDoor can be installed anywhere in the system, using it as a normal door and independently of the rest of the panels. Then it can be stacked as the rest of the panels, opening the system completely. It allows any locking system.

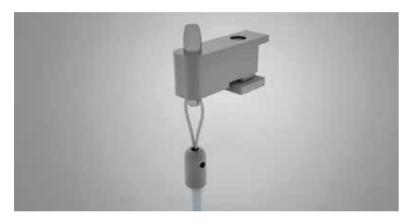

The width of the SlidingDoor should not exceed 950 mm.

# **ADITIONAL SYSTEM COMPONENTS**

#### STANDARD LOCK

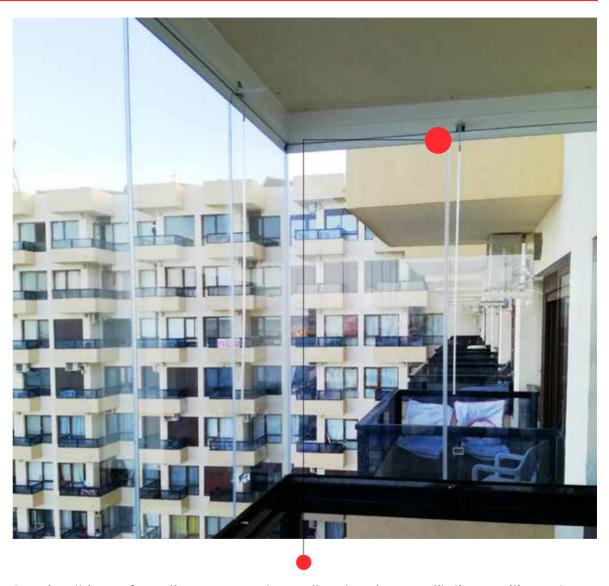

The standard CLAROFLEX® configuration has both top and bottom locks, which are independent mechanisms that prevent unintentional openings of the system.

Top lock

Bottom lock

By using this configuration, you can leave the door in a ventilation position, where the door is locked in a semi-open state, as well as allowing the separation of the individual panels a little bit, leaving space between them for better ventilation.

## **OTHER LOCKS**

#### **SHORT HANDLE LOCK SIS044**

#### **SPECIFICATIONS**

Dimensions (height x width x depth):  $160 \times 160 \times 135$  mm. Finishings: Polished st/steel – Brushed st/steel. Glass width: 10 and 12 mm. **Key cylinder on both sides:** Yes.

#### **FEATURES**

- Stainless steel hardware.
  - Stainless steel front.
- AISI 316 stainless steel plates.
  - Reversible latch.
  - The key moves the latch.
- 40 mm from the glass end to the cylinder centre. —

#### **SPECIFICATIONS**

Dimensions (height x width x depth): 160 x 90 x 130 mm.

**Finishings:** Polished st/steel – Brushed st/steel.

Glass width: 10 and 12 mm. **Key cylinder on both sides:** Yes.

#### **FEATURES**

- Stainless steel hardware.
- Stainless steel front.
- AISI 316 stainless steel plates.
- Reversible latch.
- The key moves the latch.
- 40 mm from the glass end to the cylinder centre.

#### LONG HANDLE LOCK SIS045

# 90° STOP

Designed to hold the panels at a 90° angle, perpendicular to the track. It prevents a door from striking the wall or any object near the system.

# STAINLESS STEEL PANEL HOLDER

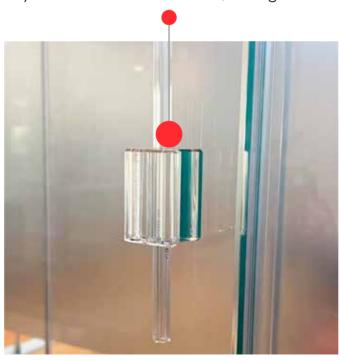

An elegant holder to secure the panel when they are open. This holder is installed in the bottom track and it is suitable for not-recessed glazings.

#### **VERTICAL GLASS KNOB**

This knob made of optical glass has a hole to contain the rod used in the top track, to secure it and help open the system. The Pivot glass knob can be used for systems that are more than 1,5 m high.

**GLASS KNOB** 

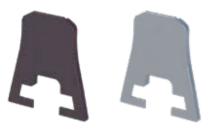

The glass knob is made of optic glass and it is installed together with the bottom and top locks when the glazing is higher than 1,5 m to guarantee a comfortable opening of the system.

The panel holder strap is made of nylon and guarantees easy adjustment to hold the panels safely in each stacking point. It is installed at a comfortable height from the floor and is included in the standard configuration of the system.

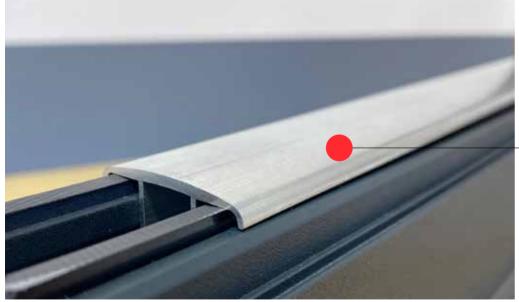

## **CAPS**

Caps are installed in both ends of the panel profiles and are suitable for straight openings, improving the look of the system, especially when open. We recomend using these caps between the door panel and the adjacent panel in all system configurations.

# **BOTTOM TRACK COVER**

Our bottom track cover has been designed to fully cover the track, protecting the sliding surface. It also provides a safer access to the glazed area, particularly when used in public spaces.

The profile is completely integrated into the opening and can be customised so it matches the structure's colour.

#### **L PROFILE**

The L-shaped vertical profile offers additional watertightness and improved resistance to wind loads. It is installed in both sides of the system: a single profile on the door's opposite opening direction; and double in the other end of the system. This profile configuration offers a better finishing to the system.

#### **U PROFILE**

The U-shaped profile is installed in the opposite end to the door and offers additional watertightness and improved resistance to wind loads. We recommend using a combination of the U profile and the L profile next to the door panel.

## **PIVOT MINI**

#### **PIVOT MINI**

Pivot mini is a system configuration consisting of a mini bottom track and specially designed components for this profile.

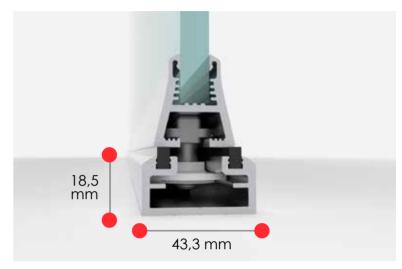

The track has a height of 22 mm and has been specially designed for interior partitioning in homes and offices, to be installed in the finished floor with or without trims.

The height of the system in the opening can be levelled by using the top levelling track with levelling screws.

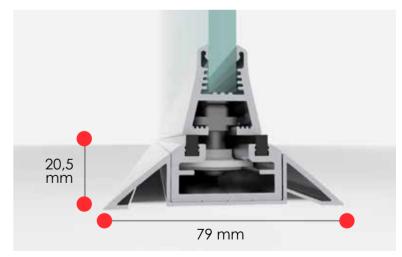

#### MINI BOTTOM TRACK CONFIGURATIONS

The system is installed on the floor without the trim.

The system is installed on the floor together with the trim.

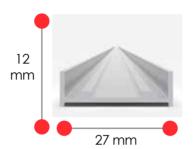

## **FLY-SCREEN CLAROFLEX®**

#### **FLY-SCREEN**

Our fly-screen is a pleated net that is placed in the exterior of the glazing. It is composed of aluminium profiles and a mechanically folded polyamide net which spreads out when the system's threads are tightened.

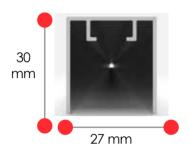

According to the chosen configuration, side or central opening, CLAROFLEX® Screen can either be spread out to a certain number of panels or throughout the entire opening.

#### **Bottom track**

The lowest profile on the market.

#### Top track

Thread-tightness adjustment system.

The Fly-screen profiles are placed parallel to the glazing system tracks.

#### TECHNICAL SPECIFICATIONS:

Maximum wind load: 37.5 Km/h. Wind load resistance class: 3.

#### **OPENING MAXIMUM DIMENSIONS:**

Maximum height: 3000 mm.

Maximum width:

Up to 4000 mm for side openings. Up to 8000 mm for central openings.

Maximum net surface: 12 m<sup>2</sup>.

#### PLEATED NET CHARACTERISTICS:

Net material: High resistance polypropylene.

Thread material: Keylar.

It offers protection against all type of insects.

#### **CONFIGURATIONS:**

Central opening. Side opening.

# **FLY-SCREEN CLAROFLEX®**

Fully open Fly-Screen with central opening.

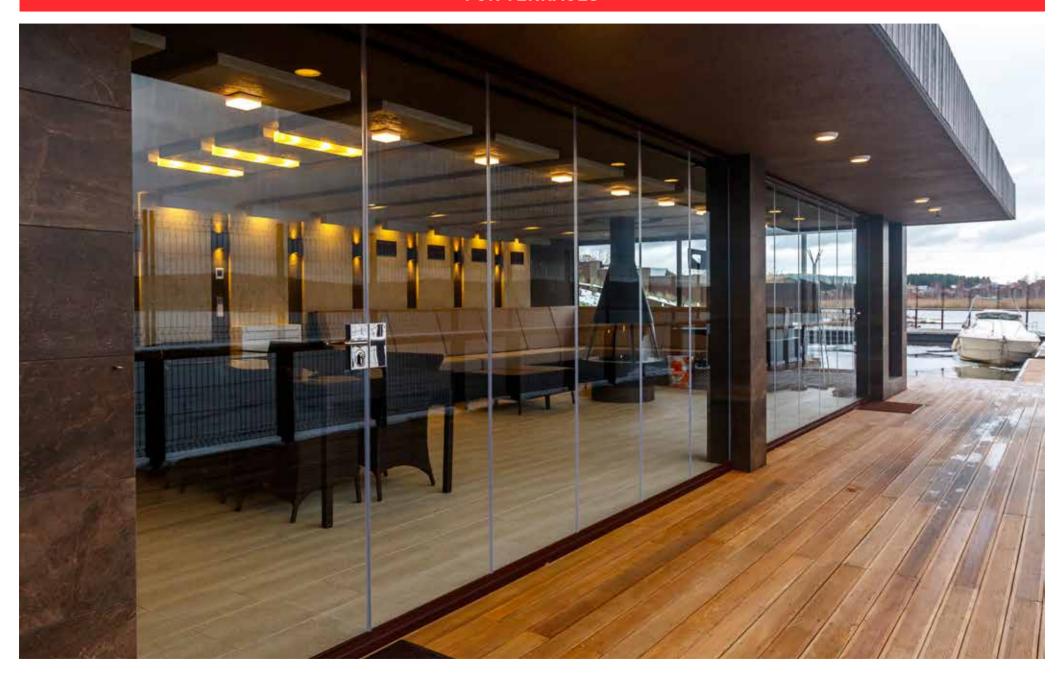

Fully closed Fly-Screen with central opening.

Half-open Fly-screen on the left side with central opening.

Half-open Fly-screen on the right side with central opening.

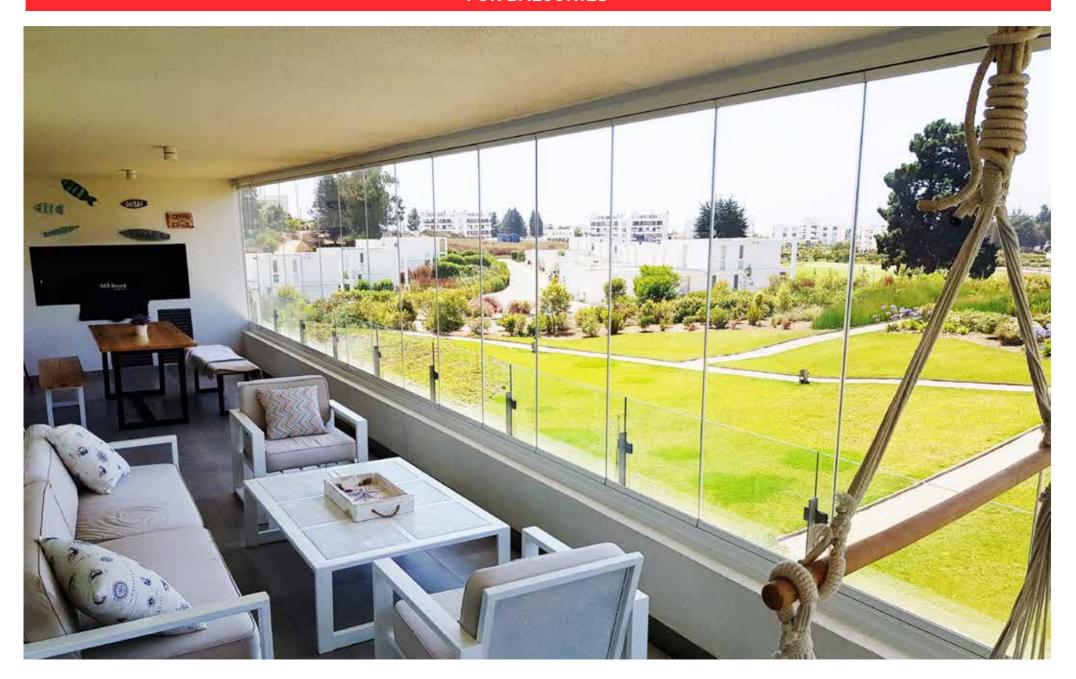

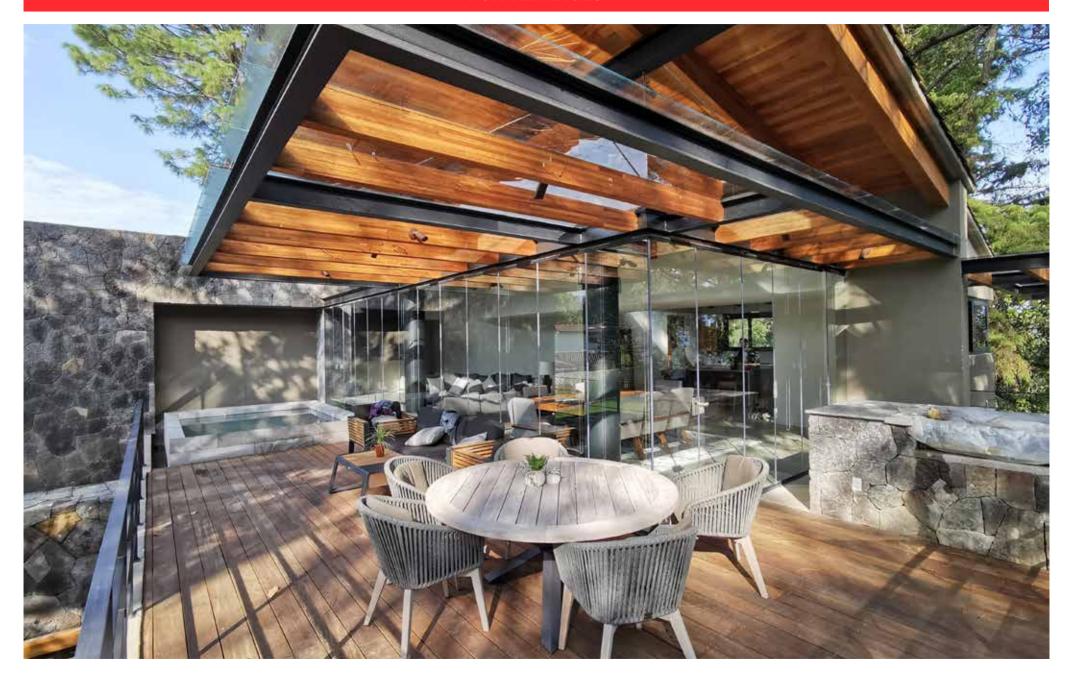

All systems are manufactured according to individual designs and are 100% integrated with the existing structures.

# FOR BALCONIES

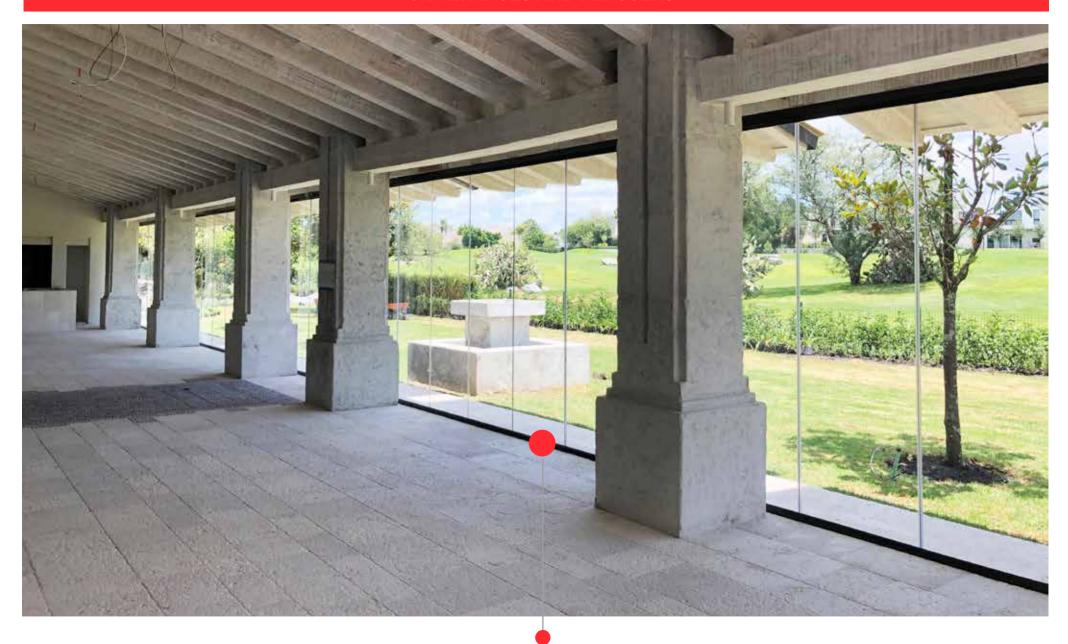

# **FOR TERRACES**

The system is completely safe as panels do not hang from the ceiling, contrary to other products on the market.

# FOR TERRACES AND PERGOLAS

CLAROFLEX® Pivot glazing allows you to use your pergola during the cold season with the help of any heater appliances.

## FOR TERRACES AND PERGOLAS

There are a myriad possible configurations to customise glass, for instance, tinted, patterned, etched, solar control, etc.

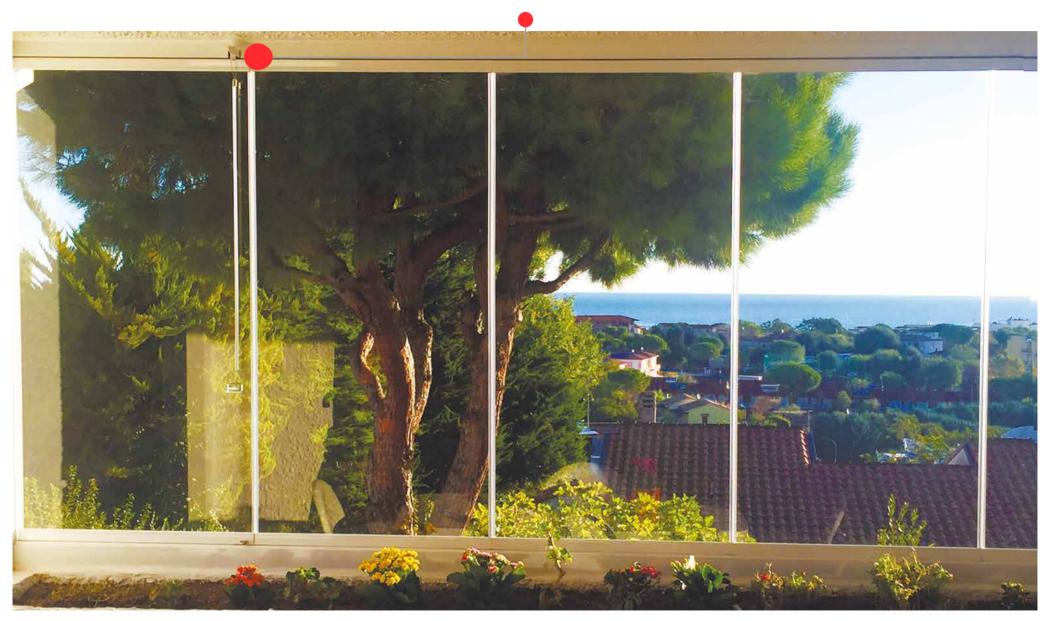

# FOR BALCONIES

CLAROFLEX® Pivot prevents the furniture in your balcony from being damaged by the weather.

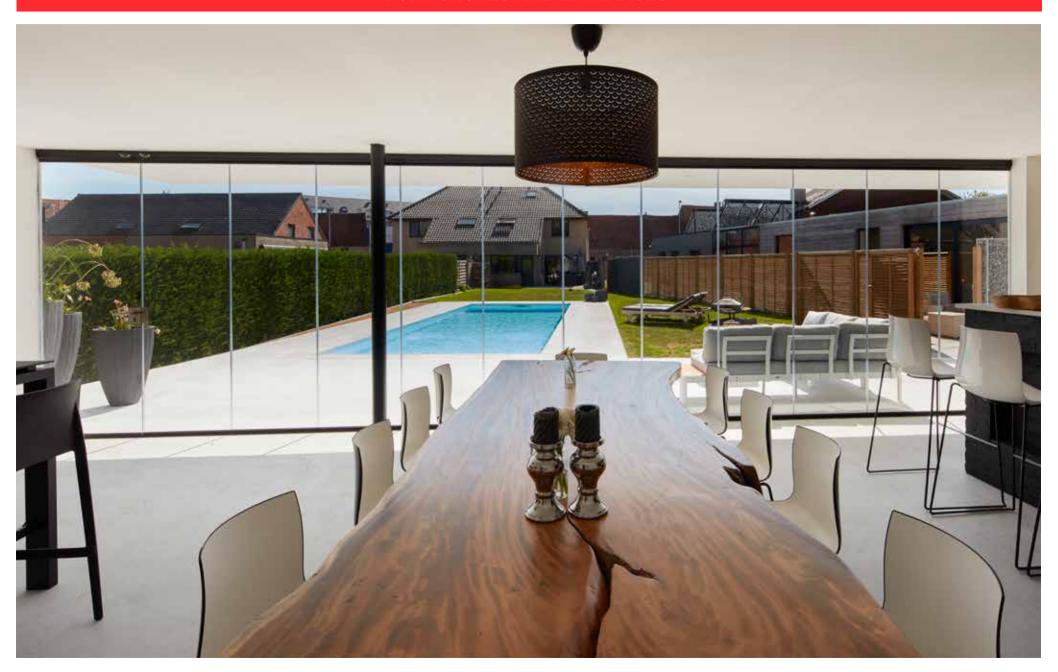

## **FOR BALCONIES**

CLAROFLEX® Pivot offers a ventilation position, where the door is locked in a semi-open state, providing ventilation to your balcony.

## FOR PORCHES AND ENTRANCES

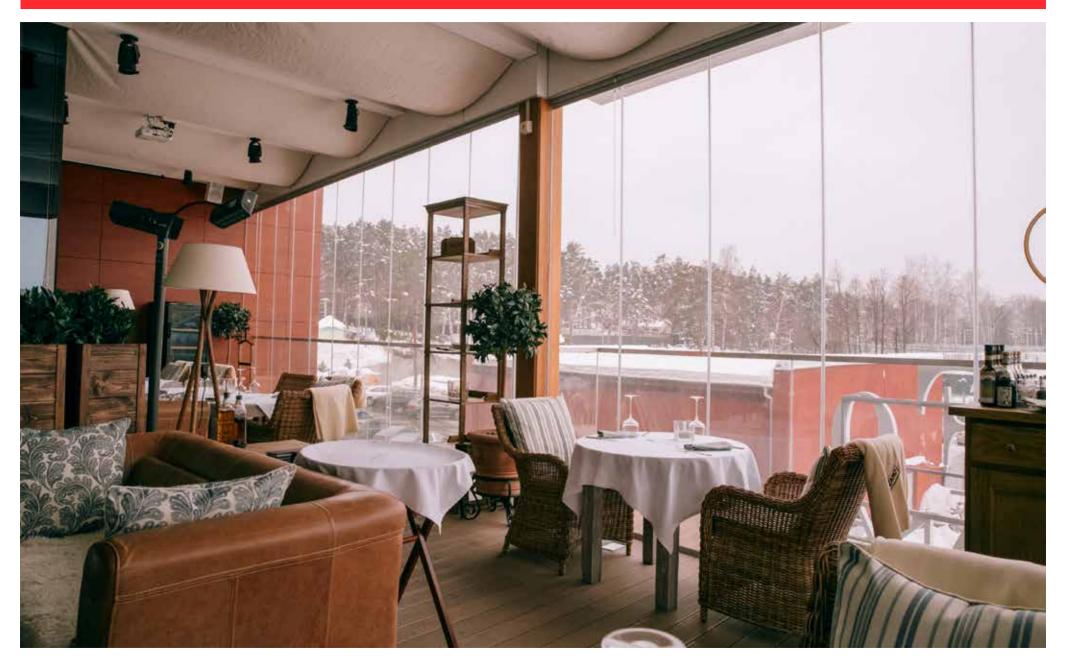

# **FOR ATICS**

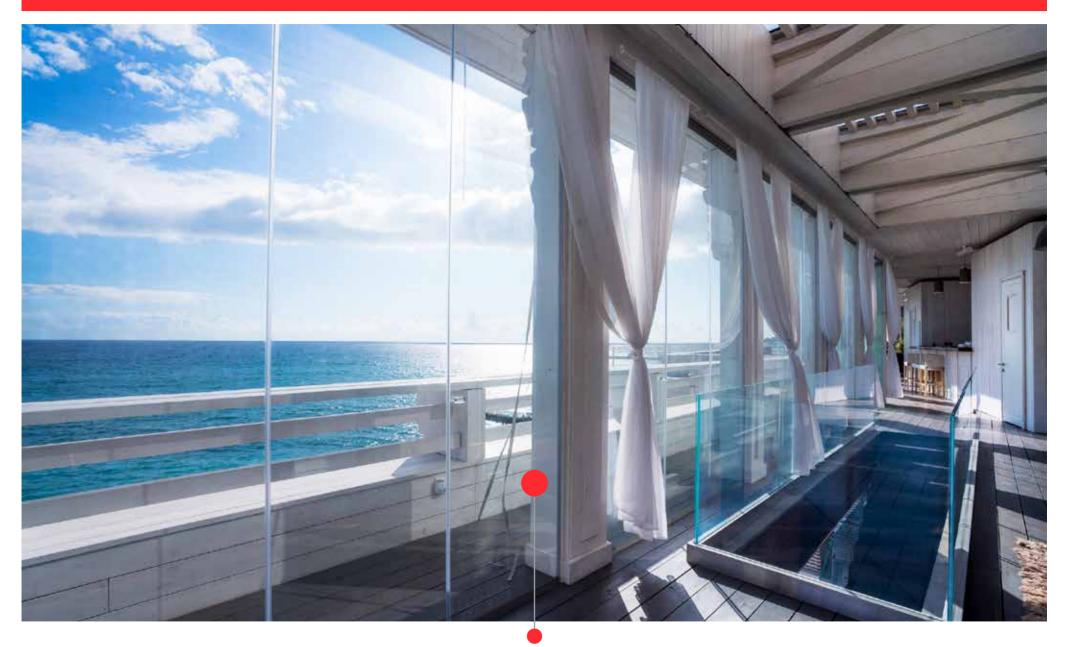

CLAROFLEX® glazing system creates additional seating space for guests in your restaurant.

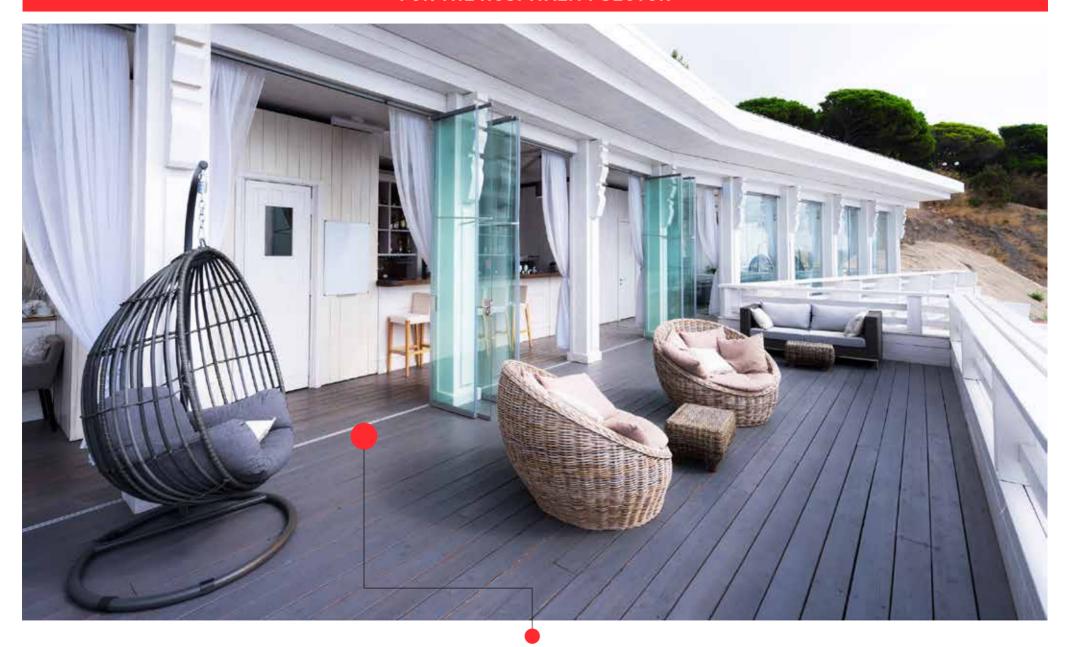

CLAROFLEX® Pivot is suitable to glaze both a large size hotel complex or restaurants with an ample seating area.

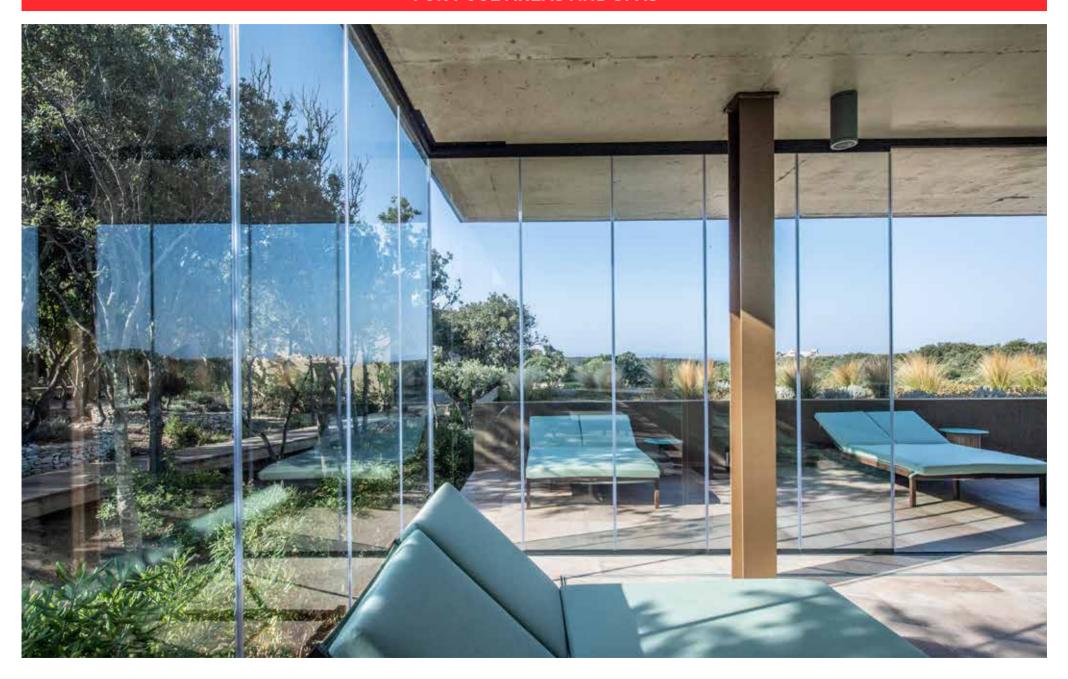

The ventilation configuration allows you to adjust the temperature inside the glazed area for better confort of the people using the space.

The **bottom track** can be completely recessed into the floor to make passage easier.

# FOR POOL AREAS AND SPAS

# **FOR INTERIORS**

#### **PIVOT EU CERTIFICATE OF COMPLIANCE**

#### CE CERTIFICATE OF COMPLIANCE Fd.1

(Under the CE Product Directives of construction 89/106/CEE)

MANUFACTURER: DISTRIBUIDORA DE SISTEMAS DE CIERRE S. L.

Calle José Calderón, s/n, aptdo. de correos, 30,

parcela 350, 29590 Málaga, Spain

PRODUCT: FRAMELESS GLAZING SYSTEM

Declares that, the product mentioned, it has been developed and manufactured under regulation of directive 89/106/CEE **PRODUCTS FOR CONSTRUCTION** and complies with the specifications from the appendix of the standards:

UNE EN 14351 - 1: 2006 Frameless Glazing Systems without vertical profiles, according to the following performances

Model – Series	Claroflex – Frameless Glazing Systems						
Material	Aluminium						
Glazing	10 mm Monolithic Tempered Glass						
Air Permeability	Class 2						
Wind Resistance	Class 6						
Hazardous Susbtances	Comply with present statutory regulations						
Date of test	23/06/2016						

Type test made by the Laboratory no 1668 ENSATEC, S. L.,
Poligono Lentiscares – Avda. Lentiscares, no 4-6, Navarrete (La Rioja), Spain.

The following standards test have been follow:

Cártama, June 23, 2016

- UNE-EN 1932:2014. Resistance to wind loads.
- UNE-EN 13659:2004+A1:2009, UNE-EN 13659:2016, Performance requirements included the security.
- UNE-EN 13659:2016. Performance requirements included the security.
- UNE-EN 13527:1999. Manoeuvre strength measurement.
- UNE-EN 1026:2000. Windows & doors. Air Permeability.
- UNE-EN 1027:2000. Windows & doors. Water tightness.

DISTRIBUIDORA DE SISTEMAS DE CIERRE, S. L., is only responsible with this Certificate of Compliance for the products provided by our Company, and produced/fabricated under our technical specifications and procedures.
